Finnair (Helsinki) has signed a Letter of Intent (LOI) for five Airbus A321s equipped with the new fuel-saving Sharklet wing tip devices, becoming the world's first airline to commit to the A321 with Sharklets. The increased eco-efficiency of the A321 with Sharklets will offer Finnair a four per cent fuel saving on specific Finnair routes compared to today's aircraft.

Deliveries of A321s with Sharklets are scheduled to begin in 2013.
